

NIRA - Meeting Notes
Meeting Convened: March 2, 2012

This month's meeting was a non-business meeting. We just brought in models and built them or most of them.

There was great rocket conversations all around. We share ideas and future rocket projects. Jason showed us how to do internal fillets with the beast of a rocket Gizmo XL. Bob brought in his very expensive fin alignment guide. I think for the price it should talk or light up, but very cool to say the least.

The idea of the build session was to kick off the flying season and get you in the mood for upcoming rocket launches.

I think everyone enjoyed themselves.
